1.10

Design plan for the Japanese Garden of Confluent Water in the Marzahn district recreation park in Berlin, Germany. Practice of Shunmyo Masuno.

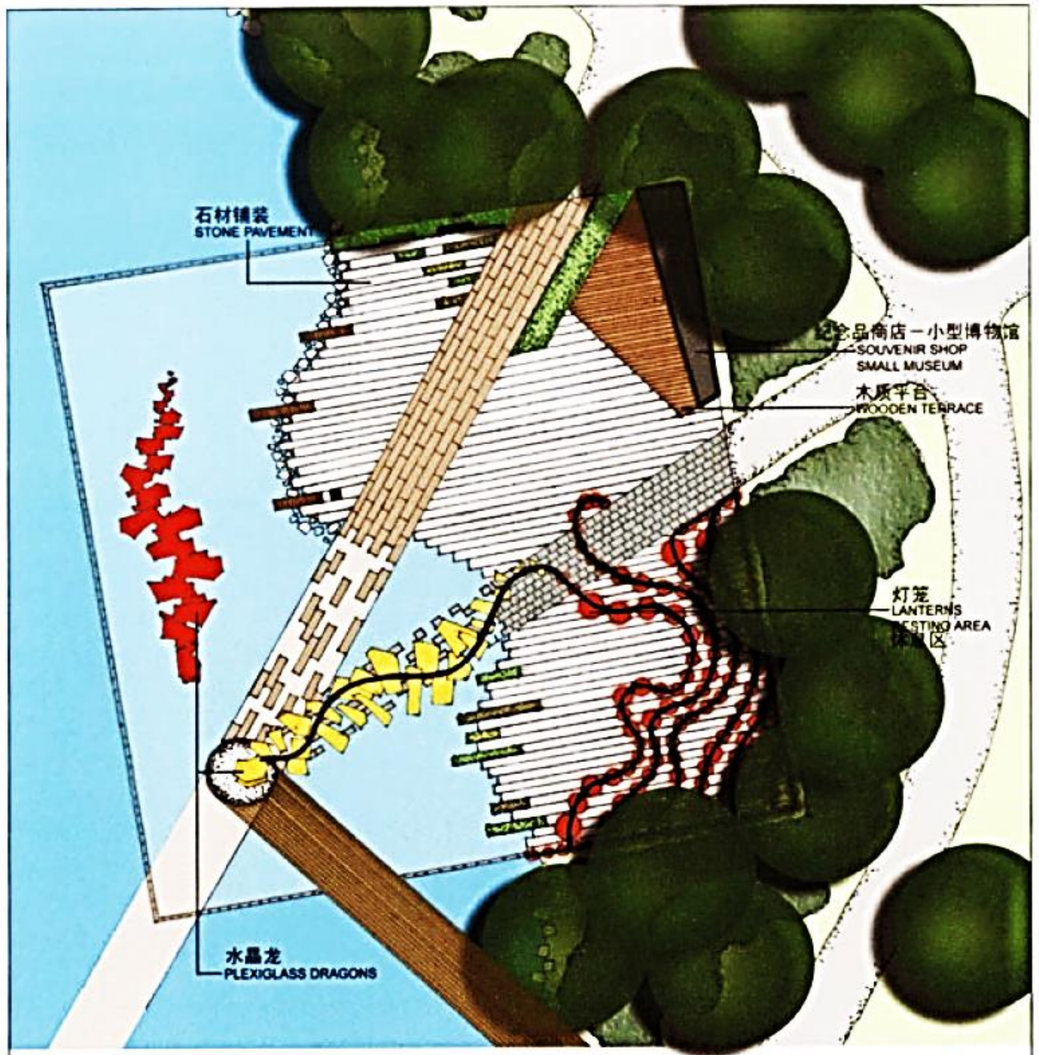

The Landscape Architecture Station
کانال تخصصی ایستگاه منظر
@istgahemanzar
@istgahe_manzar_arshad

DESIGN IDEA IS BASED ON SHIPYARD INDUSTRY PRESENT IN THIS AREA FOR A LONG TIME. THROUGH THIS TOPIC AND DESIGN PEOPLE SHOULD EXPERIENCE THE CULTURE OF SHIPYARD INDUSTRY AND THE PEOPLE WHO WORK THERE. MAIN DESIGN ELEMENTS ARE SHIPS WHICH HAVE DIFFERENT FUNCTIONS SUCH AS RESTING POINTS , REPRESENTATION AND CHILDREN PLAY. WHOLE PLAZA REPRESENTS SHIPYARD TRANSFORMED INTO A URBAN SPACE ADJUSTED TO PEOPLE'S NEEDS.

设计灵感来源于这个区域有较长历史的造船工业。根据这一主题，通过设计，让人们体验船舶工业的文化并了解工作在那里的人的情况。主要设计元素是船，在这里船提供了各种各样的功能，诸如：休息场所、标志物和儿童游戏场所等。整个广场表达了造船工厂已演绎为适应现代人们需要的城市空间这一设计思想。

1.11 Detail of the design for the Green Dragon Park in Shanghai, China. Turenscape.

LOCAL CULTURE PLAZA REPRESENTS LOCAL CUSTOMS AND BELIEFS AND DESIGN ELEMENTS ARE SUPPORTING STRONGLY THAT TOPIC. THIS PLAZA IS BY DESIGN IMAGINED AS PEOPLE'S PLAZA FOR ALL THE USERS AND PEOPLE'S GATHERING. THE PLAZA IS SOME KIND OF REMINDER OF CHINESE CULTURE AND TRADITION. MAIN DESIGN ELEMENTS ARE TWO DRAGONS PLAYING WITH A BALL AND LANTERNS WHICH ARE MOST COMMON AND VERY RECOGNIZABLE PART OF CHINESE CULTURE. THEY ARE ALSO MULTIFUNCTIONAL. REPRESENTATION, CHILDREN PLAY, RESTING POINT AND PASSAGE.

民俗文化主题园应代表当地的习俗和信仰，设计元素应强烈表达这一主题思想。这个广场设计定位为人民广场，为所有使用者和人们聚会使用，表达了宝山区传统的彩灯和龙船文化民俗。主要设计思想是以二龙戏珠和彩灯展示为主题，这些都是宝山区最公认的传统文化组成部分。在这里飞舞的水晶龙，路上、水中，晶莹剔透；红灯笼好似摇曳的大风铃，吸引大人小孩驻足休憩，人们沉浸在一片欢乐祥和之中。

Laminated glas

Lamnated glass joined togtether with silicon.

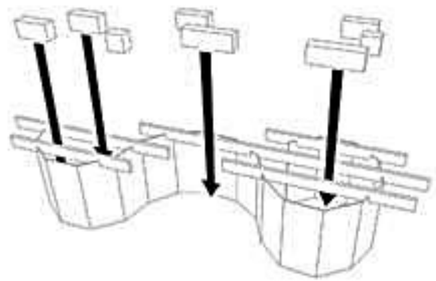

Stable strucutre

The glass composition and angel gives a stable strucutre.

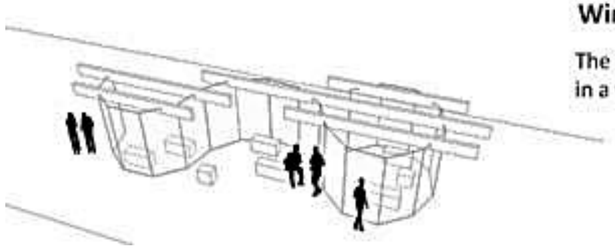

Beams

The beams locks the strucutre and give weight. Since the complete structure is stable in itlsef there is no need for additional constructive elements.

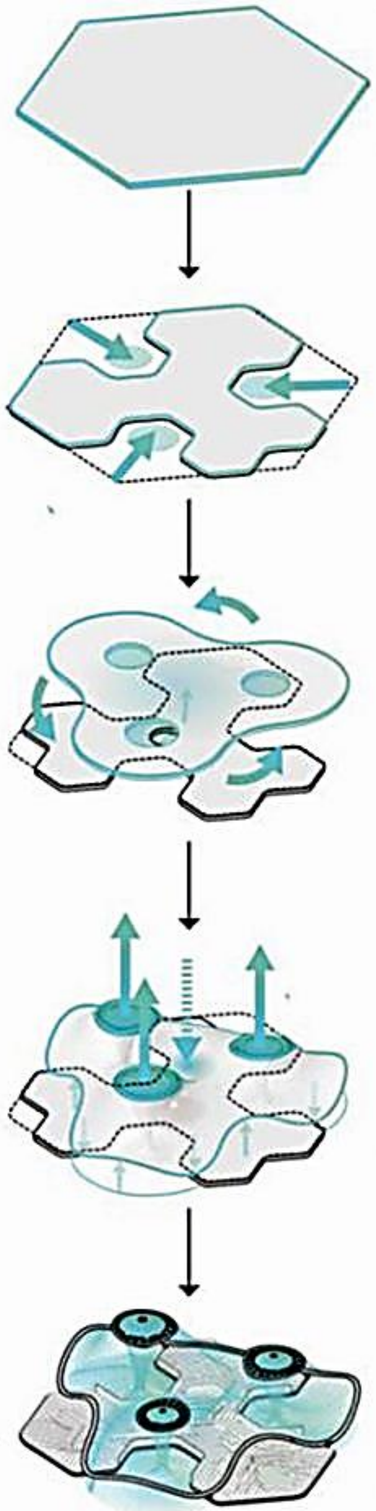

Seating

Wooden cubes allows visitors to sit and tie the pavilion to the site.

Wind shelter

The pavilion is acting wind shelter in a weather exposed enviorment.

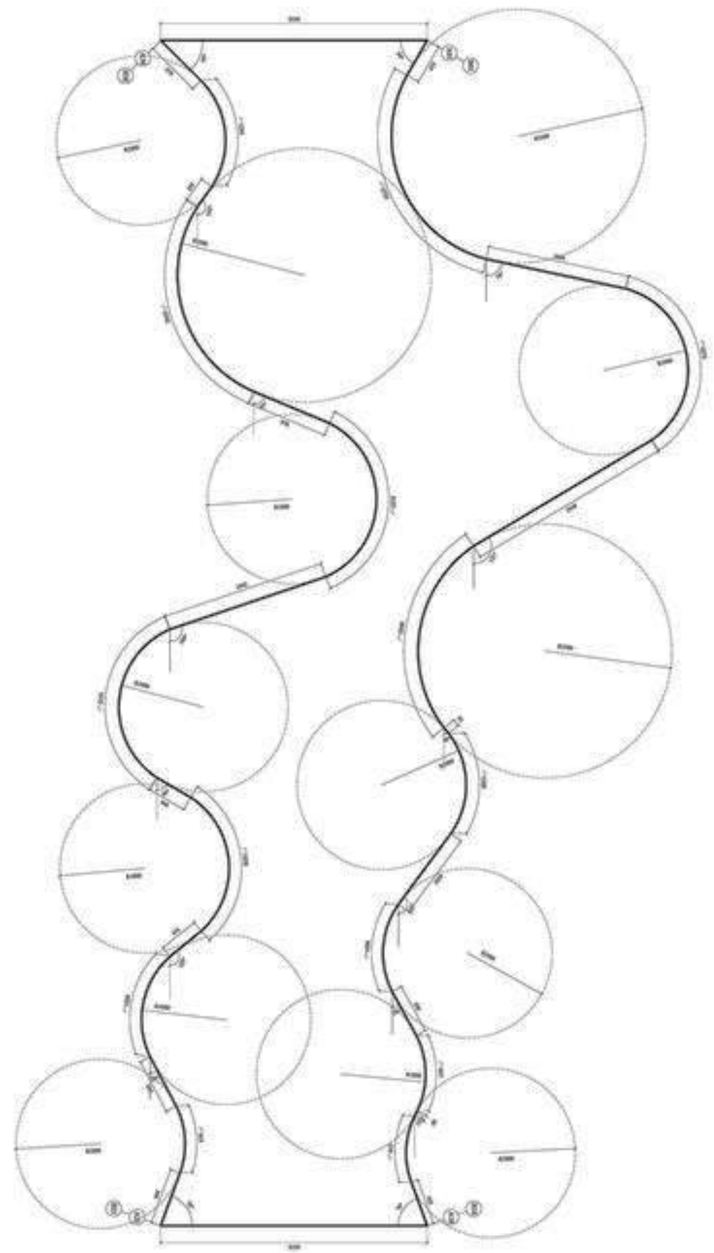

01 | Base Grid
A hexagonal grid serves as base raft geometry for multidirectional combinations.

02 | Raft Geometry
Functional pockets are opened up for visitor and water flows, allowing a continuous paths for multiple connected rafts.

03 | Roof Outline
An offset and rotated membrane surface forms the roof, covering the open spaces of the raft.

04 | Continuous Tentscape
High- and lowpoints of the roof are defined for water collection, entrances and water distribution points.

05 | Surface Detail
A downwards-spiraling network of flowlines defines the arrangement of pipes on roof membrane.

[below]
***6** - Section of Ashbridges Marsh Boardwalk*

The section details the cells working, being able to change water channel depth and width to alter wetland water qualities like velocity of flowing water and oxygen levels. Creating a landscape able to provide a flexible landscape to undergo many testing capabilities. It also allows for quick adaptive responses to preserve wildlife habitat or create conditions suitable for animal species and even flood and erosion protection. Heron perches also feature sensors to gather data such as dietary or health information, therefore utilizing the Heron as a predominant indicator species within the region to influence and make adaptable changes within the environment.

[right]
***6** - Ashbridges Marsh*

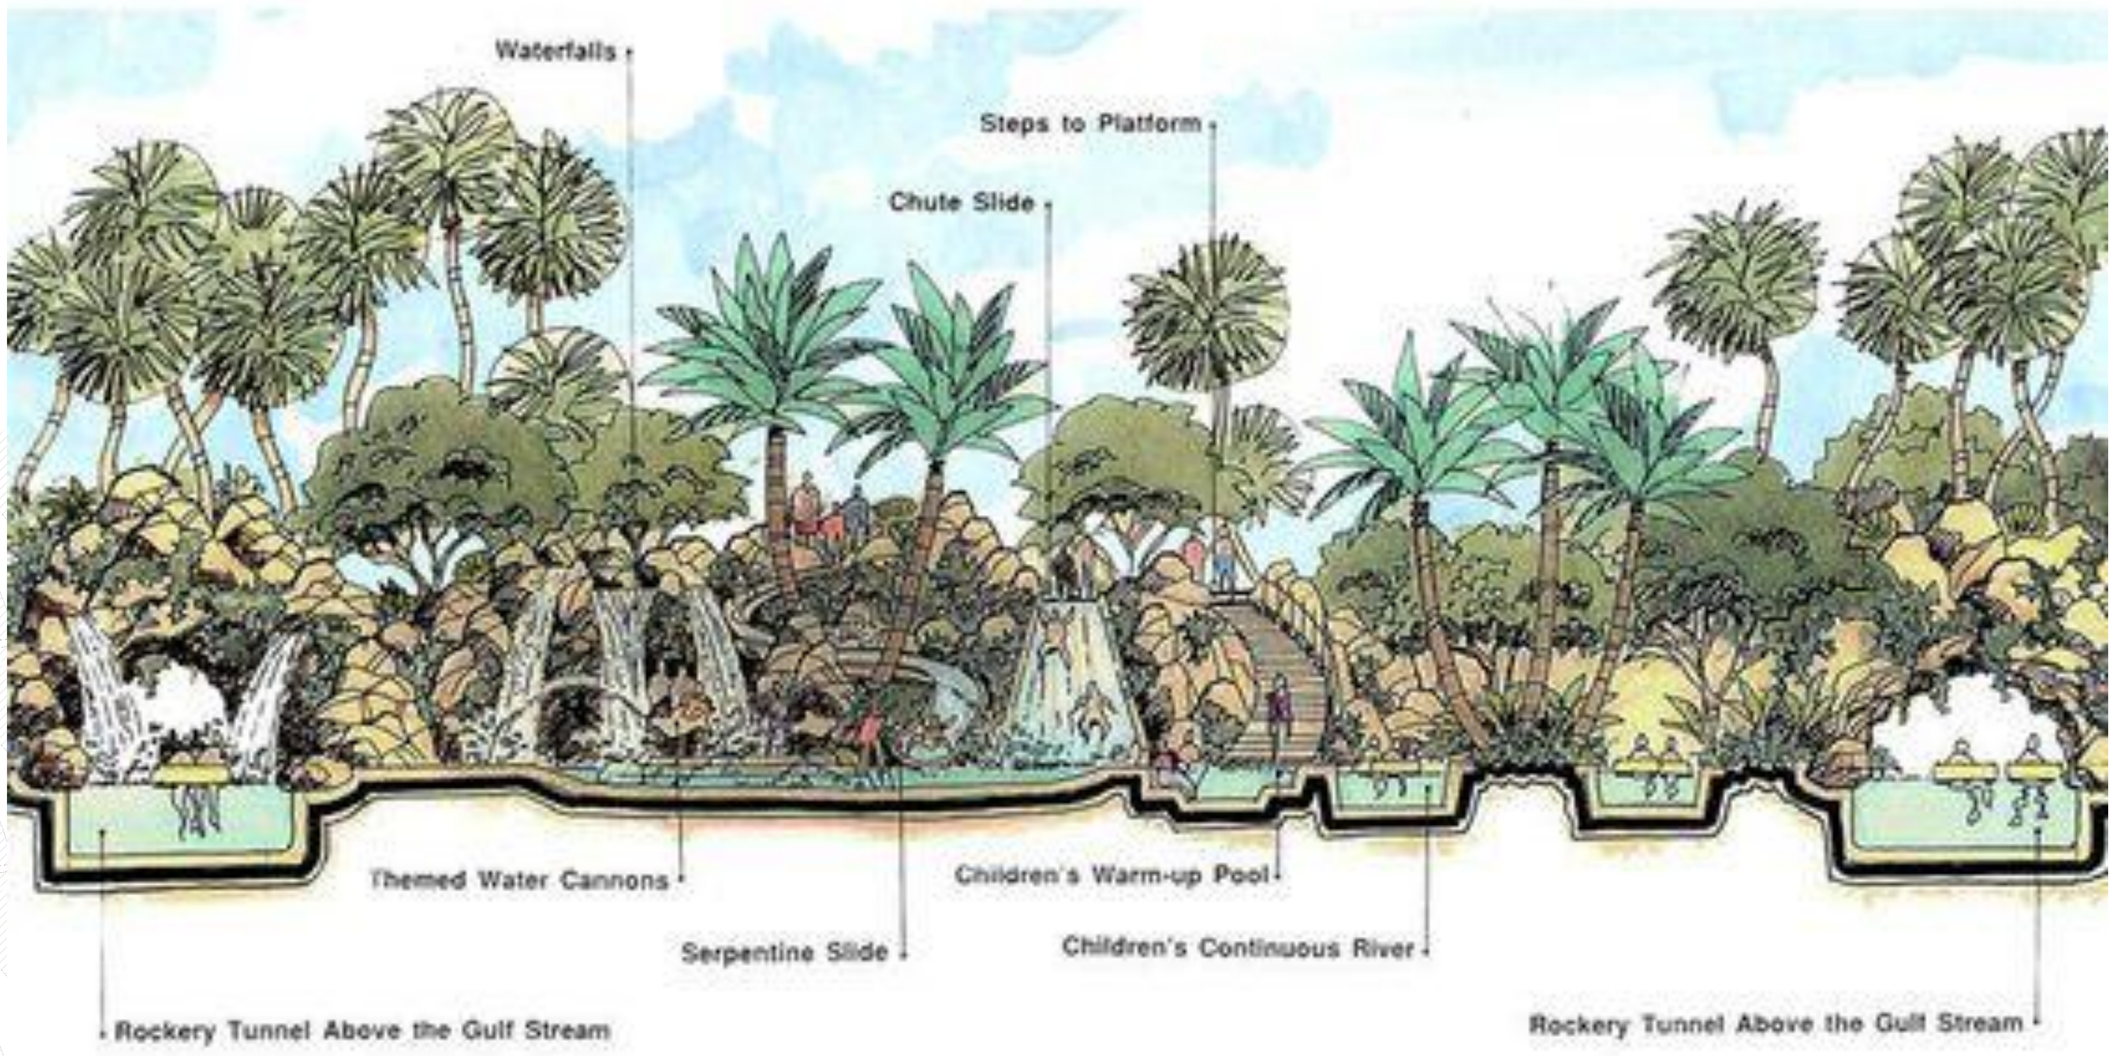

The boardwalk system throughout the marshland would support a wide variety of animals. The idea was to not only restore marshland but to give legibility to the landscape providing a new identity as a technological wetland research facility that doubles as a flexible wetland infrastructure made up of cells that can perform fluvial geomorphology.

In the end, the design mixes the improbability of these things together on a piece of land the city truly never had and implements it for the people and the emergence of this new ecological-based industry through a collaborative approach where the public realm is actively engaged in the development of ***New Nature.***

SUSTAINABILITY CONCEPT

The project designed in the interaction of man-made and natural aims to save most of the site to the green therefore the hill in the site is used for housing offices conference and workshop spaces in terraces underneath the green texture

The building situated on the south of the site is designed as a landmark for the area and is in close contact with the terrace structures in different levels. The terrace buildings offer a working environment intertwined with nature while the large spaces in front of them provide a suitable place for a wide range of activities like workshops or sustainability experiments
